<i>Preface</i>	<i>xvii</i>
<i>Introduction</i>	<i>xxi</i>

I The Oracle Certified Master, Java EE 6 Enterprise Architect Exam and Certification	I
Widespread Capabilities for Application Development	3
Java Is the Glue That Binds the Application Development Process ...	4
Companies Increasingly Need the Internet to Compete	6
Challenges of Application Development for the Enterprise	6
Increasing Programmer Productivity	7
JEE Architecture Must Respond to Consumer Demand	8
The Architect Must Be Able to Integrate JEE and Legacy Systems	8
The JEE Standard Promotes Competition and Choices	9
Design Goals of JEE Architecture	9
JEE Architects Should Strive for Service Availability	10
JEE Architecture and Connectivity to Existing Data	10
Expanded User Definition: Customers, Employees, and Partners	11
Flexible User Interaction	11
Flexible Business Component Model	12
The New Architect Role: Comprehensive Skill Set Required	12
Large-scale, Distributed Enterprise Systems and Integration Risk	13
Quality of Service	13
Nonfunctional Requirements	13
Risk Evaluation and Control	14
Technology Responsibilities	14
Management Responsibilities	15
Difference between Architecture and Design	16

Architectural Principles	17
Registering for Oracle Certified Master, Java EE 6 Enterprise Architect Distinguishes the Java Professional	18
Objectives of the Exam	18
Starting Point	21
General OCMJEA Test Preparation Tips	25
Essay Test Preparation Tips	27
2 Application Design Concepts and Principles	31
Identify Nonfunctional and Quality of Service Requirements That Influence Application Design	33
Nonfunctional Requirements	33
Quality of Service and Architecture	34
Identify How the Separation of Concerns Principle Applies to the Component Model of a Java EE Application	41
Decomposition and the Separation of Concerns	41
Tiers	42
Identify the Correct Interpretation of Separation of Concerns as It Applies to the Java EE Service Layers	43
Layers	44
Identify the Effects of an Object-Oriented Approach to System Design	45
Fundamental Object-Oriented Concepts	45
Analysis and Design of Object-Oriented Architecture	49
Modeling and the Software Development Process	53
Exercise 2-1: Design Activities	58
Unified Modeling Language	59
UML Diagrams	60
UML Tools	61
Elements Used in UML	61
Relationships Used in UML	64
Diagrams Used in UML	64
Stereotypes	72
Practical Use of UML Diagrams	72
✓ Two-Minute Drill	92
Q&A Self Test	97
Self Test Answers	103

3 Common Architectures 109

Identify the Appropriate Strategy for Deploying Client Applications to Desktop and Mobile Platforms, the Principles for Designing a User Interface, and the Benefits of Applying Client Tier Patterns	110
Client Tier Design Principles	111
Identify Best Practices for Exception Handling, Logging, and Business Tier Patterns	115
Exceptions in General	115
Exception Handling Overview	116
Exercise 3-1: Issue Resolution	117
Logging for All Applications	118
Identify Design Patterns That Address Specific Challenges in the Web Tier, Including Authentication, Authorization, and Scaling and Clustering to Meet Demand	119
Security Patterns by Tier	120
Scaling and Clustering Patterns	124
JEE Clustering	125
Identify Java EE Technologies, Including JMS, JCA, and Web Services, and Design Patterns That Address Specific Challenges in Enterprise Integration	128
Java EE Technologies: JMS and Design Patterns in Enterprise Integration	128
Exercise 3-2: Publish/Subscribe Messaging	129
Java EE Technologies: JCA and Design Patterns in Enterprise Integration	129
Java EE Technologies: Web Services and Design Patterns in Enterprise Integration	132
Identify the Challenges in Integrating Enterprise Resources, the Java EE Technologies That Address Them (Including JPA and JDBC), and the Communication Protocols That Support Tier-to-Tier Communication (Including RMI, IIOP, and CORBA)	135
Integration of Enterprise Resources	136
The Evolution of Enterprise Integration	139
✓ Two-Minute Drill	144
Q&A Self Test	149
Self Test Answers	153

4 Integration and Messaging 157

Identify the APIs Available for a Java EE Technology-Based System to Communicate with External Resources. Outline the Benefits and Drawbacks of Each Approach.	158
Java Message Service (JMS)	159
Java EE Connector Architecture (JCA)	159
Java API for XML-based Web Services (JAX-WS)	160
Java API for RESTful Web Services (JAX-RS)	160
Java Database Connectivity (JDBC)	161
Java Persistence API (JPA)	161
Common Object Request Broker Architecture (CORBA) ...	162
Remote Method Invocation (Java/RMI)	163
Identify and Detail the Technologies Used to Integrate Business Components with External Resources, Including JMS and JCA ...	164
Messaging Basics	164
Java Message Service	165
Message-Driven Bean (MDB)	166
Java EE Connector Architecture (JCA)	168
Describe the Technologies Used to Integrate Business Components with Web Services, Including XML over HTTP, JSON, SOAP, and REST.	169
What Are Web Services?	169
Extensible Markup Language (XML)	170
JavaScript Object Notation (JSON)	171
SOAP	171
Representational State Transfer (REST)	172
Identify How a Service-Oriented Architecture (SOA) Facilitates System Integration and Best Practices	173
Architecture and Design for SOA	173
Business Process Execution Language (BPEL)	175
Service Component Architecture (SCA) and Service Data Objects (SDO)	175
Enterprise Service Bus (ESB)	175
Best Practices for SOA	177
SOA Governance	177
Comparing Integration Technologies	178

✓ Two-Minute Drill	179
Q&A Self Test	184
Self Test Answers	188

5 Business Tier Technologies 191

Background on New Features in Java EE 6	193
Identify the Correct EJB Technology to Apply for a Given Scenario, Including Entity Classes, Session Beans, Message-Driven Beans, Timers, Interceptors, and POJOs	195
Enterprise Bean Overview	195
Entity Class	196
Entity Bean	197
Session Bean	198
Message-Driven Bean (MDB)	200
Timer Service	201
Interceptors (AOP)	201
Identify Benefits and Drawbacks of Different Persistence Technologies such as BMP, CMP, and JPA, Including Ease of Development, Performance, Scalability, Extensibility, and Security	203
Gauging Benefits and Drawbacks	203
Bean-Managed Persistence (BMP)	205
Container-Managed Persistence (CMP)	206
Java Data Objects (JDO)	206
Java Database Connectivity (JDBC)	207
Java Persistence API (JPA)	208
Comparing Persistence Types	209
Identify the Benefits and Drawbacks of Implementing Web Services in the EJB Component Container	209
Web Services	210
Enterprise Beans and Web Services	210
Select the Appropriate Use of JPA and JPQL in a Given Scenario ...	211
Java Persistence API (JPA)	211
Java Persistence Query Language (JPQL)	212
✓ Two-Minute Drill	214
Q&A Self Test	219
Self Test Answers	222

6	Web Tier Technologies	225
	Web Tier Development Roles	226
	Identify the Benefits and Drawbacks of Using URL Rewriting and Cookies to Manage HTTP Session State	227
	HttpSession Object	228
	Session State Tracking: Should We Use Cookies or URL Rewrite?	229
	Maintaining State Using JEE Session Beans	232
	Exercise 6-1: Session State	233
	Servlets	233
	Identify Appropriate Uses for JSP and Servlet Technology, and JavaServer Faces in a Given Java EE Application	233
	Servlets	234
	JavaServer Page	235
	JavaServer Faces	235
	Scripting Languages	238
	Web Tier Input Data Validation	239
	Control and Logic Concerns	239
	Web Flow	241
	Identify the Benefits of Using an EJB Container with a Web Container Instead of a Web Container Alone	242
	Benefits of Enterprise Beans	242
	Session Beans	246
	Message-Driven Bean (MDB)	248
	Identify the Differences between Client Pull and Server Push Architectures	248
	Identify the Benefits and Drawbacks of Using a Browser to Access Asynchronous, Lightweight Processes on the Server	250
	Browser Asynchronous APIs	251
	✓ Two-Minute Drill	258
Q&A	Self Test	261
	Self Test Answers	266
7	Design Patterns	271
	Benefits of Using Design Patterns	273
	Design Patterns by Gamma et al., AKA the “Gang of Four” (GoF)	273
	Benefits of a Specified GoF Design Pattern	275

Select an Appropriate Gang of Four (GoF) Pattern for a Given Application Challenge	278
GoF Creational Design Patterns	278
GoF Structural Design Patterns	284
GoF Behavioral Design Patterns	292
Identify a Gang of Four (GoF) Design Pattern, Using a Description of Its Features	306
Java EE Patterns	308
Demonstrate Knowledge of Java EE Design Patterns	309
Identify the Use of the Law of Leaky Abstractions or a Specific Anti-Pattern in a Given Scenario	336
✓ Two-Minute Drill	347
Q&A Self Test	352
Self Test Answers	359

8 Security 363

Identify Elements of the Security Model in the Java SE Environments for Remote Clients, Including Web Start, Applets, and the Role of the SecurityManager Class	364
Java Web Start	365
Java Applet	365
The Security Manager	366
More Java SE Security Features/Mechanisms	368
Select Appropriate Locations to Implement Java EE Security Technologies or Features in a UML Component and Deployment Diagram	369
Java EE Security Depicted within UML Component Diagram ...	369
Java EE Security Depicted within UML Deployment Diagram ...	369
Classify Security Threats to an Enterprise Application and Select the Measures an Architect Can Propose to Mitigation Them	372
Security Architectures	372
Security Threats	374
Identify Techniques Associated with Declarative and Programmatic Security, Including the Use of Annotations, Deployment Descriptors, and JAAS Technology	378
Security Model	379
Securing Web Components	380
Securing Enterprise Bean Components	384
Java Authentication and Authorization Service (JAAS)	386

Identify the Security Technologies That Apply to	
an Application's Code, Messaging, and Transport Layers	387
Application-Layer Security	387
Message-Layer Security	388
Transport-Layer Security	388
✓ Two-Minute Drill	390
Q&A Self Test	393
Self Test Answers	397
